Patent Claims:

WO 2006/068613

1. A method of receiving a bullet, comprising: providing a plate structure (62) having an airtight enclosure (64) enclosing high performance fiber layers (66), a hard

PCT/SE2005/002009

- layer (68), a textile layer (70) having openings defined therein and a semi-solid layer (72); a bullet penetrating through the airtight enclosure (64); increasing a pressure and expanding a volume inside the airtight enclosure;
- the increased pressure and volume separating the layers (66) from the hard layer (68) and the textile layer (70) from the hard layer (68); the hard layer (68) deforming the bullet; the textile layer (70) attaching to the bullet to follow the
- 15 bullet; and the semi-solid layer (72) sticking to the bullet.
- The method according to claim 1 wherein the method further comprises inserting the plate structure (62) into a pocket
 (50) of a vest (10).
 - 3. The method according to claim 1 wherein the method further comprises attaching a side plate (38, 40) to a lower edge (42) of the vest (10).

25

- 4. The method according to claim 1 wherein the method further comprises the increased pressure expanding the enclosure (64) to create room between the layers (66, 68, 70).
- 5. The method according to claim 1 wherein the method further comprises providing the plate structure (62) with a polymeric layer (80) having a plurality of air-bubbles (82).

6. The method according to claim 5 wherein the method further comprises the polymeric layer (80) transversely spreads out penetration energy of the bullet.

8

PCT/SE2005/002009

WO 2006/068613

15

- 5 7. The method of claim 1 wherein the method further comprises placing a trauma plate (84) behind the plate structure (62).
- 8. The method of claim 1 wherein the method further comprises removably attaching a gas mask bag (54) on a rear section (44) of the vest (10).
 - 9. The method of claim 1 wherein the method further comprises the textile layer (70) being a woven fiberglass, the woven fiberglass attaching to the bullet and the semi-solid material (72).
- 10. The method according to claim 1 wherein the method further comprises providing a second textile layer (74) and a second semi-solid layer (76), the layer (74) and the layer (76) sticking to the bullet.
